

CRM AI Demo Script

Live Meeting Guide

Step-by-step prompts to demo Twenty CRM's AI skills in a live screen share.
Copy-paste each prompt into the CRM chat.

Prepared for: Joe Occhipinti, Nick Delia, Gianni Strano
Estimated demo time: 20-25 minutes

Before You Start

1. Open Twenty CRM: <https://abc-twenty.izcgmb.easypanel.host>
2. Click the **chat icon** (bottom-right corner) to open the AI assistant
3. Have these sidebar tabs visible: **LED Products, Estimates, Estimate Lines, Rate Cards**
4. Keep this script on your second monitor or printed out

Key talking point: "Everything I'm about to show you runs inside one platform. No switching between Salesforce, Wrike, Airtable, and Excel. One CRM, one AI, everything connected."

Part 1: Morning Briefing

~2 minutes

Setup: "Joe, imagine it's Monday morning. You open the CRM, click the AI chat, and type one thing:"

Prompt 1 — Daily Digest

Morning briefing

EXPECT: The AI returns a structured daily digest — urgent tickets, today's events, overdue tasks, staffing gaps, and the week ahead. All real data from the CRM.

TIP: Point out: "This pulls from 5 different data sources — events, tickets, tasks, staff, services — and combines them into one 60-second read. No one had to prepare this report."

Part 2: Venue Deep Dive

~3 minutes

Transition: "Let's say you want to check on a specific venue. Watch what happens when I ask about Prudential Center."

Prompt 2 — Venue Health Report

How's Prudential Center doing?

EXPECT: Full venue report — company info, staff roster, open tickets, upcoming events, active services, contract dates. Flags any issues automatically.

TIP: Point out: "It knows the venue, the company, who's assigned there, what tickets are open, what events are coming up — all from one question."

Part 3: Event Staffing

~2 minutes

Transition: "Nick, this one's for you. Let's check staffing."

Prompt 3 — Unstaffed Events

Any unstaffed events this week?

EXPECT: List of events needing tech assignments, with suggested techs based on home venue and region. Flags urgent events within 48 hours.

Prompt 4 — Staff Availability (optional follow-up)

Show me staff availability for Northeast

EXPECT: Tech roster filtered by region with availability status and home venues.

Part 4: Ticket Triage

~2 minutes

Transition: "Chris, when a ticket comes in, the AI can auto-triage it."

Prompt 5 — Ticket Triage

New ticket: LED panels flickering on the main scoreboard at Prudential Center during last night's game

EXPECT: Auto-categorizes as hardware/HIGH priority, suggests the right tech to assign based on venue, finds similar past tickets at that venue for diagnostic clues.

TIP: Point out: "It looked at past tickets at this venue and found similar issues. That historical context saves diagnostic time."

Part 5: Live Estimate (The Wow Moment)

~5 minutes — THIS IS THE KEY DEMO

Transition: "Now here's where it gets interesting. Let's say we just got a call from MetLife Stadium. They want a scoreboard replacement and new ribbon boards. Watch what happens."

Prompt 6 — Quick Estimate

Estimate for MetLife Stadium — main scoreboard 30x20ft outdoor 10mm, plus two ribbon boards 4x200ft each at 16mm

EXPECT: The AI queries the LED Product catalog (108 products) and Rate Cards (23 rates) to build a real estimate. Creates an Estimate record + 3 EstimateLine records in the CRM. Shows a formatted breakdown table with costs, sell prices at 30% margin (Natalia Math), spare parts, bond.

PAUSE HERE. Say: "Everything you just saw — the product matching, the pricing, the margin calculation — it's all coming from real data that lives right here in the CRM. Let me show you."

Step 6b — Show the Data (click-through, no typing)

Action: Click "LED Products" in the sidebar. Say: "These are the 108 products in our catalog — Yaham, LG, OES — with real pricing. The AI searched this to find the right panels."

Action: Click "Rate Cards" in the sidebar. Say: "And these are our pricing rates — \$120/sqft for 10mm, \$85 for 16mm, 30% hardware margin, 1.5% bond. All the numbers Natalia uses. The AI pulled from these."

Action: Click "Estimate Lines" in the sidebar. Find the MetLife view tab that was just created. Say: "And here's the estimate as a table — just like a spreadsheet. Every estimate we create shows up like this."

Part 6: Product Lookup

~2 minutes

Transition: "Need to check what products we have for a specific situation? Just ask."

Prompt 7 — Product Search

What outdoor LED panels do we have in 10mm?

EXPECT: Filtered list of outdoor 10mm products from the catalog with specs, pricing, and brightness. Includes a recommendation based on the use case.

Prompt 8 — Product Comparison (optional)

Compare Yaham vs LG for an indoor arena at 4mm

EXPECT: Side-by-side comparison of matching products with pricing, specs, and recommendation.

Part 7: Sales Pipeline

~2 minutes

Transition: "Jireh, this replaces the Salesforce pipeline view."

Prompt 9 — Pipeline Status

Pipeline status

EXPECT: Deals grouped by bid status (RFP Received, Scoping, Bid Submitted, Won, Lost) with total value per stage.

Prompt 10 — Expiring Contracts

Any expiring contracts in the next 90 days?

EXPECT: List of companies with contracts ending soon, ranked by urgency, with annual contract values and revenue at risk.

Part 8: Revenue & Services

~2 minutes

Prompt 11 — Revenue Tracking

What's our monthly recurring revenue across all active services?

EXPECT: MRR calculation from active Service records, broken down by venue and service type.

Prompt 12 — Service Coverage

Which venues have no active services?

EXPECT: List of venues with gaps — no services, expired services, or warranty-only.

Part 9: The Cross-Domain Question

~2 minutes — THE UNIFICATION MOMENT

Transition: "Here's something no single old tool could ever answer. Watch this."

Prompt 13 — Cross-Domain Intelligence

Which venues have the most open tickets AND have events coming up this week?

EXPECT: The AI crosses ticket data + event data + venue data to find venues that need attention BEFORE their events. This is the power of having everything in one platform.

Key talking point: "This question touches tickets, events, venues, and staff — four different objects. In the old world, someone would need to check Salesforce, then Wrike, then Airtable, then a spreadsheet, and manually cross-reference. Here it takes 5 seconds."

Part 10: General Knowledge

~2 minutes

Transition: "And if you just have a question about anything in the business — just ask."

Prompt 14 — General Query

Summarize everything we know about the Red Sox account

EXPECT: Company details, all linked venues (Fenway + JetBlue), contacts, active services, recent tickets, events, and any open deals.

Prompt 15 — Another General Query

How many events did we staff last month?

EXPECT: Count of completed events with staffing data, broken down by venue or league.

Closing Remarks

Wrap up with these points:

- **One platform** — Replaces Salesforce (expiring), Wrike, Airtable, and spreadsheets
- **AI-native** — 16 custom skills that understand ANC's business. Not a generic chatbot.
- **Real data** — 108 LED products, 23 rate cards, 53 companies, 49 venues, 500+ events, 680+ tickets, 25 technicians — all queryable by the AI
- **Estimates in the CRM** — Create estimates with real product pricing, see them as tables, export to Excel
- **Self-hosted** — Your data on your server. No vendor lock-in. Hetzner backups running daily.
- **Connected** — Events and tickets sync from Services Dashboard every 15 min. Proposals sync from Proposal Engine.

Next steps: "We're ready to start onboarding the team. Nick and Gianni can replace Wrike with the Tasks tab immediately. Chris gets ticket triage. Natalia gets the estimator. Everyone gets the AI chat."

Quick Reference — All 15 Prompts

Copy-paste these directly into the Twenty CRM AI chat:

#	Prompt (copy-paste into CRM chat)
1	Morning briefing
2	How's Prudential Center doing?
3	Any unstaffed events this week?
4	Show me staff availability for Northeast
5	New ticket: LED panels flickering on the main scoreboard at Prudential Center during last night's game
6	Estimate for MetLife Stadium – main scoreboard 30x20ft outdoor 10mm, plus two ribbon boards 4x200ft each at 16mm
7	What outdoor LED panels do we have in 10mm?
8	Compare Yaham vs LG for an indoor arena at 4mm
9	Pipeline status
10	Any expiring contracts in the next 90 days?
11	What's our monthly recurring revenue across all active services?
12	Which venues have no active services?
13	Which venues have the most open tickets AND have events coming up this week?
14	Summarize everything we know about the Red Sox account
15	How many events did we staff last month?
