

Twenty CRM

AI Skills Guide

15 custom AI skills that unify RFP analysis, estimation, proposals, operations, ticketing, and staffing under one platform.

Prepared for ANC Sports Leadership

1 Why One Platform

Replacing Salesforce, Wrike, and Airtable with Twenty CRM

2 What Are AI Skills?

How skills work inside Twenty CRM

3 Operations Skills

7 skills for daily ops, staffing, tickets, contracts

4 Proposal Engine Skills

7 skills connecting CRM to RFP analysis and estimation

5 ANC Copilot

General-purpose assistant with full ANC context

6 Skill Reference Table

Complete inventory with triggers and examples

7 Architecture Diagram

How all systems connect through Twenty CRM

8 Getting Started

How to use skills today

1 Why One Platform

ANC Sports currently relies on multiple disconnected tools to run operations. Salesforce manages contacts and deals. Wrike handles task assignments. Airtable stores structured operational data. Google Calendar tracks events. Excel and SharePoint hold staff lists and reports. Each tool has its own login, its own data silo, and its own way of doing things.

Twenty CRM replaces all of them. It's a single self-hosted platform where every piece of ANC's business lives together: companies, venues, deals, events, tickets, tasks, staff, and contracted services. When data lives in one place, the AI can connect dots that humans would miss.

What Gets Replaced

Old Tool	What It Did	Twenty CRM Replacement
Salesforce	CRM, contacts, deals, pipeline	Companies + People + Opportunities
Wrike	Task management, project boards	Tasks with kanban views + filtering
Airtable	Venues, services, schedules	Venues + Services + custom fields
Google Calendar	Event scheduling	VenueEvents (direct event feed)
Excel / SharePoint	Staff lists, reports	Technicians + AI-generated reports

The key insight: When your CRM knows about venues, events, tickets, staff, AND deals, the AI can answer questions like *"Which venues have expiring contracts AND rising ticket counts?"* or *"Show me unstaffed events this week at venues with active maintenance contracts."* No single old tool could answer those cross-domain questions.

2 What Are AI Skills?

Twenty CRM has a built-in AI assistant (the chat icon in the bottom-right corner). You can ask it questions, and it will query your CRM data to find answers. **Skills** are expert playbooks that teach the AI how to handle specific types of requests with domain knowledge it wouldn't otherwise have.

Think of skills like giving a new hire a detailed procedure manual. The AI already knows how to read and write CRM data. Skills tell it *what* to look for, *how* to combine data from multiple objects, and *what format* to present results in. Skills can also call external APIs — like the Proposal Engine — to perform actions that go beyond the CRM itself.

How to Use a Skill

1. **Open the AI chat** in Twenty CRM (bottom-right chat icon)
2. **Ask a natural question** — the AI automatically loads the right skill
3. **Get structured results** — tables, summaries, action items, not raw data dumps

Example Prompts

You Say...	Skill Activated	What Happens
"How's Prudential doing?"	Venue Health Report	Full venue status with tickets, events, staff, services
"Any unstaffed events this week?"	Event Staffing Assistant	Lists events needing tech assignments
"Estimate a 20x40 outdoor LED"	Quick Estimator	Calls Proposal Engine, returns real pricing
"Pipeline status"	Pipeline Tracker	Deals by stage, stuck opportunities, win rates
"New RFP from MetLife"	RFP-to-Deal Pipeline	End-to-end: analyze, estimate, create opportunity

3 Operations Skills

These 7 skills handle day-to-day operations: venue monitoring, event staffing, ticket management, task tracking, and contract oversight. They work entirely within Twenty CRM's data — no external API calls needed.

Venue Health Report

Primary users: Joe, Nick

Generates a comprehensive status report for any venue. Pulls open tickets, upcoming events, assigned staff, active services, and contract dates into one view. Flags staffing gaps, expiring services, and high-priority tickets automatically.

Example prompts:

"How's Prudential?" • "Venue status for TD Garden" • "What's going on at Fenway?"

Output: Venue name, company, staff roster, service table, ticket summary, event list, flag alerts

Event Staffing Assistant

Primary users: Nick, Gianni

Finds events that need technician assignments, checks who's available by venue and region, and suggests the best techs to assign. Prioritizes home-venue staff first, then same-region, then flags when travel is needed.

Example prompts:

"Unstaffed events this week" • "Who's working the Celtics game?" • "Staff availability Northeast"

Output: Unstaffed event list with suggested techs, availability matrix, urgency flags

Ops Daily Digest

Primary users: Joe

Morning briefing that pulls everything relevant for the day: urgent tickets, today's events, overdue tasks, staffing gaps, and the week ahead. Designed to be scannable in under 60 seconds.

Example prompts:

"Morning briefing" • "What's happening today?" • "Daily digest"

Output: Urgent items first, then today's events, ticket summary, overdue tasks, week ahead calendar

Ticket Triage

Primary users: Chris

Automatically categorizes incoming tickets by type (hardware/software/general), suggests priority based on impact, recommends the right technician, and finds similar past tickets at the same venue for diagnostic clues.

Example prompts:

"New ticket at Prudential" • "Categorize this issue" • "Ticket trends"

Output: Category, priority recommendation, suggested assignee, similar past tickets

Pipeline Tracker

Primary users: Jireh, Natalia

Analyzes the full sales pipeline: deals by stage, total value per stage, stuck opportunities (no activity in 30+ days), expiring client contracts, and win/loss rates by quarter.

Example prompts:

"Pipeline status" • "Stuck deals" • "Win rate" • "Expiring contracts"

Output: Pipeline summary table, stuck deal alerts, contract renewal list, win rate calculation

Contract & Revenue Tracker

Primary users: Joe, Jireh

Monitors contract expirations across all clients, calculates monthly recurring revenue from active services, identifies coverage gaps where venues have no active services, and flags revenue at risk from expiring contracts.

Example prompts:

"Revenue at risk" • "MRR" • "Service coverage" • "Expiring contracts"

Output: Revenue summary, expiration timeline (color-coded), service coverage map, MRR breakdown

Venue Onboarding

Primary users: Nick, Gianni

When a deal is won, automatically generates 20+ tasks across 4 phases: pre-install, procurement, installation, and go-live. Each task gets proper type, category, priority, and estimated timeline based on deal size.

Example prompts:

"Won the Panthers deal — set up onboarding" • "New venue setup for MetLife"

Output: 20+ tasks created in Twenty with proper categorization, linked to venue and company

4 Proposal Engine Integration Skills

These 7 skills connect Twenty CRM to the **Proposal Engine** at proposals.anc.com. They use the AI's Code Interpreter to call the Proposal Engine's REST API, bringing RFP analysis, cost estimation, product matching, and document generation directly into the CRM chat interface.

How it works: When you ask the AI to estimate a project, it loads the Quick Estimator skill, which tells it to use the Code Interpreter (Python) to call `proposals.anc.com/api/estimator/ai-quick`. The Proposal Engine does the heavy lifting — product matching, cost calculation, margin analysis — and returns structured results that the AI formats into a readable report. The CRM never leaves your screen.

RFP Analyzer

Primary users: Natalia, Matt

Pulls completed RFP analysis results from the Proposal Engine into the CRM. Shows extracted LED display specifications (sizes, pixel pitch, environment), creates or links to Company and Venue records, and generates an Opportunity with all specs pre-filled.

Example prompts:

"What RFPs have been analyzed?" • "Pull RFP results for Prudential" • "Create opportunity from the MetLife RFP"

API: GET `/api/rfp/analyses`, GET `/api/rfp/analyses/{id}`

Quick Estimator

Primary users: Natalia, Matt, Jeremy

Get instant cost estimates from natural language. Describe a project in plain English and the AI calls the Proposal Engine's estimator to extract display specs, match products from the catalog, and return rough pricing with hardware, structure, and installation breakdowns.

Example prompts:

"How much for a 20x40 outdoor LED?" • "Estimate: 3 displays, 10mm, indoor arena" • "Price out a scoreboard for BofA Stadium"

API: POST `/api/estimator/ai-quick`, GET `/api/agent-skill/products`

Proposal Generator

Primary users: Natalia

Creates full proposals, budgets, and letters of intent from CRM Opportunity data. Pulls client, venue, and deal info from the CRM, sends it to the Proposal Engine, and returns links to editable proposals, downloadable PDFs, and Excel workbooks. Automatically updates the Opportunity with the proposal URL.

Example prompts:

"Create a proposal for the Panthers deal" • "Generate a budget for Prudential" • "Make an LOI for the MetLife expansion"

API: POST /api/agent-skill/create-proposal, POST /api/agent-skill/generate-excel

LED Product Catalog

Primary users: Matt, Jeremy, Natalia

Searches ANC's LED product database by pixel pitch, environment (indoor/outdoor), manufacturer, and brightness. Returns product specs with pricing per square foot. Includes a pixel pitch guide for recommending the right product based on viewing distance.

Example prompts:

"What outdoor panels do we carry?" • "10mm options from Yaham" • "Best product for indoor arena, 30ft viewing distance"

API: GET /api/agent-skill/products

SOW & Document Generator

Primary users: Natalia, Matt

Generates professional documents from CRM data: installation Scope of Work (Word), spec sheets (PDF), bid response forms, scoping workbooks (multi-sheet Excel), and subcontractor quote templates for electrical, structural, and LED suppliers.

Example prompts:

"Generate a SOW for the BofA install" • "Create spec sheet" • "Fill the bid form for this RFP" • "Scoping workbook for Panthers"

API: POST /api/sow/generate-installation, POST /api/rfp/pipeline/fill-bid-form

RFP-to-Deal Pipeline

Primary users: Natalia, Jireh

The end-to-end orchestrator. Takes an analyzed RFP and runs the full pipeline: retrieves extracted specs, matches products, creates CRM records (Company + Venue + Opportunity), generates a proposal, creates scoping documents, and sets up follow-up tasks. One command, seven steps, everything linked.

Example prompts:

"New RFP from MetLife — run the full pipeline" • "Process the Prudential RFP end to end"

API: Multiple endpoints orchestrated: /api/rfp/analyses, /api/agent-skill/products, /api/rfp/pipeline/create-proposal

Venue Performance Analytics

Primary users: Joe, Nick

Generates performance reports by combining CRM data (tickets, events, services, staff) with Proposal Engine analytics. Shows ticket trends, staffing rates, service health, and resolution times. Can compare venues side-by-side to identify which need attention.

Example prompts:

"Performance report for Prudential" • "Compare TD Garden vs Fenway" • "Which venues need attention?"

API: POST /api/performance/reports/generate + CRM queries

5 ANC Operations Copilot

The Copilot is a general-purpose assistant that understands ANC's entire business: team members, organizational structure, data model, connected systems, and workflows. It acts as the fallback when no specialized skill matches — and it can load other skills on-the-fly when it recognizes a specific need.

What it knows:

- All CRM objects: Companies, Venues, Services, People, Opportunities, Events, Tickets, Tasks, Technicians
- ANC team: Joe (COO), Jireh (Sales), Natalia (Proposals), Nick & Gianni (Ops), Chris (Support)
- Connected systems: Proposal Engine, Services Dashboard, Slack
- Key workflows: sales pipeline, event staffing, ticket resolution, contract lifecycle

Example questions:

- "Which venues have the most tickets AND expiring contracts?"
- "Who on our team handles the Northeast region?"
- "Summarize everything we know about the Panthers account"
- "What's the total MRR across all active services?"
- "How many events did we staff last month?"

6 Complete Skill Reference

Skill	Category	Users	Trigger Example
Venue Health Report	Operations	Joe, Nick	"How's [venue]?"
Event Staffing Assistant	Operations	Nick, Gianni	"Unstaffed events?"
Ops Daily Digest	Operations	Joe	"Morning briefing"
Ticket Triage	Operations	Chris	"New ticket at [venue]"
Pipeline Tracker	Operations	Jireh, Natalia	"Pipeline status"
Contract & Revenue Tracker	Operations	Joe, Jireh	"Expiring contracts"
Venue Onboarding	Operations	Nick, Gianni	"Won the [deal] — onboard"
RFP Analyzer	Proposal Engine	Natalia, Matt	"Pull RFP for [project]"
Quick Estimator	Proposal Engine	Natalia, Matt	"Estimate a 20x40 LED"
Proposal Generator	Proposal Engine	Natalia	"Create proposal for [deal]"
LED Product Catalog	Proposal Engine	Matt, Jeremy	"What 10mm panels?"
SOW & Doc Generator	Proposal Engine	Natalia	"Generate SOW for [venue]"
RFP-to-Deal Pipeline	Proposal Engine	Natalia, Jireh	"Process RFP end to end"
Venue Performance	Proposal Engine	Joe, Nick	"Performance at [venue]"
ANC Copilot	General	Everyone	"Tell me about [anything]"

7 Architecture: How Everything Connects

Twenty CRM sits at the center of three systems. Data flows in from the Services Dashboard (events, tickets every 15 min) and the Proposal Engine (deals, proposals). The AI skills can read from all systems and write back to the CRM, creating a unified operational picture.

Source	Target	Method	Data Flowing
Proposal Engine proposals.anc.com	Twenty CRM	AI Skills (Code Interpreter)	RFP specs, estimates, proposal links
Services Dashboard anc-services	Twenty CRM	Cron Sync (every 15 min)	Events, tickets, staff records
Twenty CRM	Slack (#ops, #wins)	Workflow Webhooks (planned)	Deal wins, overdue tasks, high-priority tickets
Twenty CRM	Proposal Engine	Webhook (fire-and-forget)	Opportunity updates, bid status changes

CRM Data Model

Object	Records	Purpose
Companies	53	Client organizations, teams, manufacturers
Venues	49	Physical locations with LED equipment
Services	NEW	Contracted service lines per venue (maintenance, staffing, warranty)
People	7+	Contacts at companies + ANC team
Opportunities	0*	Deals and proposals (* to be populated from Proposal Engine)
Events	500+	Games and concerts (synced from Services Dashboard)
Tickets	680+	Support issues (synced from Services Dashboard)
Tasks	0*	Work items replacing Wrike (* to be populated)
Technicians	25	ANC field staff assigned to venues

8 Getting Started

Step 1: Open Twenty CRM

Navigate to <https://abc-twenty.izcgmb.easypanel.host> and log in with your workspace credentials.

Step 2: Open the AI Chat

Click the chat icon in the bottom-right corner of any page. This opens the AI assistant that has access to all 15 custom skills plus the 12 built-in skills.

Step 3: Ask a Question

Type your question in natural language. The AI will automatically select the right skill based on your intent. You don't need to specify which skill to use — just describe what you need.

Quick Start Examples by Role

Role	Try This	What You Get
Joe (COO)	"Morning briefing"	Gets the Ops Daily Digest: urgent items, today's events, overdue tasks
Nick (Ops)	"Unstaffed events this week"	Gets Event Staffing Assistant: events needing techs, available staff
Chris (Support)	"New ticket: screens flickering at Prudential"	Gets Ticket Triage: priority, suggested tech, similar past tickets
Natalia (Proposals)	"Estimate 4 outdoor displays for MetLife"	Gets Quick Estimator: specs, product matches, rough pricing
Jireh (Sales)	"Pipeline status"	Gets Pipeline Tracker: deals by stage, stuck items, win rate

All 15 skills are live and active now. The AI assistant is ready to use — no setup required on your end. Just open the chat and start asking questions. Skills will continue to improve as we learn what questions are most common and which data combinations are most valuable.
